

OVERSIZED FIRE TRUCK TO IRAQ

THE CHALLENGE

One of ICAT's clients approached the team with a large project shipment that was a part of a \$2 billion dollar defense contract. The client needed to have an oversized fire truck transported from the United States to Iraq. The shipment required complex international trade compliance-related processes to be fulfilled prior to moving, including hazmat prep, in-depth international documentation, and a Diplomatic Note Approval that was a 3-month process to complete by government officials.

THE RESULTS

No matter the size, requirements, destination, or timeframe, we are here to help! Our team of subject matter experts specialize in creating custom plans, taking quick action, and coming up with solutions to solve logistics challenges that may arise. We do everything we ensure your freight gets where it needs to be.

THE SOLUTION

For months prior to sailing, ICAT provided both temporary indoor and outdoor warehousing and storage for the fire truck until it was ready to be shipped. The fire truck needed to be picked up on a certain day and by a specific time in order to get it loaded onto the next sailing at the Port of Baltimore. When the specialized truck arrived at the facility to load the fire truck, they realized the trailer was too short to fit the oversized vehicle safely and securely. Realizing there was minimal time to resolve this issue, the experts at ICAT quickly jumped into action to find the correct-sized trailer.
